

Welcome To Change It JS!

Change It JS! Is a popular (not very) useful coding debug tools, but also can be used for fun. You can use it in the console or you can use the functions inside of your website.

These functions, some of which require an api key from <https://openweathermap.org>. You can delete functions as required. There are also more than 50+ functions created like “utf8encode” in version no. 1.3.5. The installation is a simple process.

Go to tinyurl.com/changeitjs2.

Installation:

On your website:

1. Go to the website “<https://tinyurl.com/changeitjs>”
2. Click your version plus download “style.css” and “test_webpage” if needed for tests.
3. We will talk about tests later.
4. Go to the website source. Create a `<script></script>` Tag.
5. Paste the code inside the brackets.

On a Different Website:

1. Do the same steps as step 1.
2. Go to the website and right click and press “Inspect”.
3. Go to the console.

Tests:

You can test by downloading style.css and test_webpage.html.

Go and paste the code in the script tag.

And test the functions.

IMPORTANT:

Create a account on openweathermap.org and paste the key in the `const apiKey = 'your_key_here';` Line.
